

The world's first 100% recycled Palm Wood producer

Supporting its ongoing commitment to sustainability, ENiTo is proud to announce that it has secured the Singapore green label, 100% recycled material for its Palm wood flooring, panels and decking. This certification enables us to produce "the world's first" range of 100% recycled-certified Palmwood.

The Singapore Environment Council (SEC), introduced the GreenLabel in 1999 which identifies products which meet the eco standards specified by the scheme and is recognised as a member of the international Global Ecolabelling Network (GEN) allowing certification by mutual recognition of SGLS endorsed products by other members of the network.

Herewith ENiTo promotes environmentally appropriate, socially beneficial, and economically viable management of the world's forest. ENiTo believes that to be a truly "green" company we must make environmental issues a significant part of the corporate culture. We are taking a leadership role in developing "recycle" flooring products from the coconut palm, *cocos Nucifera*. The utilization of the timber is as efficient as possible, 100% of the log is used, including the waste material from the manufacturing process which is utilized for the production of electricity and/or pallets.

By choosing an ENiTo Palm wood floor, you're not just buying the finest wood products available. You're casting a vote for sustainable forestry, and support forest management that preserves important forest wildlife and ensures safe, healthy and fair conditions for people working in the forest.

Helping conserve forests through responsible wood use. Remember it's your future too - choose well.
